

COVID-19 related measures for Outdoor Activities with TrekCo

TrekCo an outdoor activity provider licensed by the Health and Safety Executive under the Adventurous Activity Licensing Act (Registration number R0043) and it is our aim that all participants are as safe as they can be when taking part in our activities. These measures are also balanced with outdoor safety management to produce the measures outlined below.

These risk assessments were created by Steve Ranger, MA (Ed), who is a holder of the Mountaineering and Climbing Instructor Award, European Mountain Leader Award and National Technical Advisor for Girlguiding UK for climbing and high ropes activities.

These measures are informed by:

- Government guidance (general): <https://www.gov.uk/coronavirus>
- Department for Education Guidance on school visits <https://www.gov.uk/government/publications/actions-for-schools-during-the-coronavirus-outbreak/guidance-for-full-opening-schools#educational-visits>
- Duke of Edinburgh's Award guidance to AAPs
- National Youth Agency's 'Managing youth sector activities and spaces during COVID-19'
- Public Health England advice (we are licensed by the Health & Safety Executive)
- Sport London <https://londonsport.org/covid-19/return-to-sport-and-physical-activity-guidance/>
- Sport England <https://www.sportengland.org/how-we-can-help/coronavirus/return-play/frequently-asked-questions-return-sport-and-activity>
- Outdoor Education Advisors' Panel National Guidance <https://oeapng.info/download/4835/>
- Duke of Edinburgh's Award 'Running expeditions during the Covid crisis' <https://www.dofe.org/thelatest/running-expeditions-july2020/>

Pre-activity and arrival

Participants should monitor their health in the lead up to their expedition or visit, and should not take part if they have any symptoms related to COVID-19. You should notify TrekCo by calling us on 01273 487509 or emailing info@trekco.com as soon as you know you will not be coming and we will make other arrangements for your trip, or discuss refunds and postponements as appropriate.

The organiser of the group will need to confirm to us that:

- no participants or accompanying staff have had any symptoms of COVID-19 in the previous 14 days before taking part in any activities;
- no participants or accompanying staff have been in contact with anyone who has tested positive for Covid within the last 14 days.

In the case of minibus travel, it should be noted that where TrekCo staff are driving participants or working in proximity to participants, TrekCo staff will have undergone a 'lateral flow' test twice a week.

Transport by minibus will comply with Covid guidelines. Windows must be open (unless weather dictates otherwise) and masks worn by TrekCo drivers. **Please see Appendix 1.**

At this time clinically vulnerable individuals and their carers must consider whether they should be taking part in such activities, and must inform us beforehand – the NYA recommends that companies provide access to activities with extra measures where possible, but you should seek medical advice if you are in this category.

Should anyone develop symptoms during the activity period, they must notify the company. The activity/day will be cancelled, and everyone advised to follow the government advice pertaining at the time of the incident regarding isolation. Everyone will be advised to contact the NHS [Test and Trace system](#). The symptomatic individual should be isolated from the rest of the bubble until collection if possible, with appropriate supervision in place where required.

The group leader should arrange for collection by or via a member of their household (you may wish to get confirmation from parents that they are prepared to do this).

In normal times, using public transport for a visit has many educational, environmental and social benefits. However, the government currently advises that public transport should be avoided if possible. Any visiting groups must weigh up these factors and apply their own solution.

Participants should travel to the activity ideally by car as a preference; or if using public transport please follow government advice about using public transport and face coverings. This period of your trip must be organised by yourselves according to [Government guidelines on the use of public transport](#) if you are unable to come by car.

Activity days and sessions

General

Policies regarding masks, distancing, 'bubbles', isolation of groups and individuals and sanitising hands and surfaces vary by school/establishment and have changed frequently over the course of the pandemic. We seek only to provide basic outlines which are relevant to a) protection of TrekCo staff and b) the provision of a basic set of measures related to each activity where this situation presents conditions differing from everyday activity, protecting both TrekCo staff and visiting clients.

Instructors will use their discretion during activities as to when masks may be necessary for themselves

A 2m distance should be maintained wherever possible from other participants and staff. Where this is not possible the 1m+ rule should be observed. Participants are requested to see Government advice regarding distancing [here](#)

Each activity will clearly have different requirements. Where possible we will not select activities requiring participants to have prolonged contact where this is feasible. The activities selected for your visit will be discussed in advance to take the proximity of participants into account.

Consideration will be given when selecting activities to excluding those activities which give rise to a greater number of minor injuries which would require first aid, if applicable.

Antiseptic hand gel usually contains a high proportion of alcohol, and could therefore be a temptation for abuse by some young people. It should be used under close staff supervision.

During some activities, it may be possible to designate or mark out 'zones' within which individual participants work, to avoid contact between them.

Working Environment and Staff

TrekCo staff will be working in proximity to each other and may encounter staff from other organisations, notably Girlguiding UK at Blackland Farm and Deers Leap Bikes staff at Deers Leap.

Staff should observe social distancing guidelines whilst working or interacting with other staff.

Meetings, if needed, should take place outside. If it is vital to meet inside then face coverings must be worn, distance maintained and staff must sanitise hands before and after the meeting

When leaving a facility, door handles and any other surface which might be used by the next group entering must be sanitised.

Equipment used should be cleaned as well as is feasible given the constraints of cleaning certain items (e.g. ropes, which cannot be cleaned using many chemicals). Where possible, equipment should be sanitised and/or quarantined according to TrekCo policy and the government guidelines pertaining at the time of the activity; however where equipment is owned by another organisation or used by all groups, staff should determine the best practical measures to be taken and agree these with the other organisation.

Equipment

We will have multiple hand sanitiser stations; there will be hand sanitiser available at all times. Please use the sanitiser frequently. You may of course wish to bring your own. Participants will be advised whether, and at which point in an activity, it is necessary to sanitise their hands.

First Aid – Where possible group leaders will carry out first aid on members of their own group. Practising Covid-safe First Aid will be emphasised. Please see also the advice from St John's Ambulance: <https://www.sja.org.uk/get-advice/first-aid-advice/covid-19-advice-for-first-aiders/> Where more advanced first aid knowledge is needed, TrekCo instructors (who are all first aid qualified) will perform first aid as necessary.

You will be issued with a mask and gloves for emergency use should you need to perform First Aid on someone else.

Notes regarding COVID-19 measures

It is incumbent on all organisers of activities for youth groups to make the decision as to whether activities can be offered safely. There is no such thing as 100% safe, and 'Organisations have a duty to reduce risk to the lowest reasonably practicable level by taking preventative measures' (National Youth Agency).

It is our opinion, and that of the Government and agencies listed above, that activities can be made sufficiently safe – not least because these take place entirely out of doors which is the safest environment for preventing transmission of a virus.

Recent research indicates strongly that Covid is considerably harder to catch from surfaces than from transmission indoors in a space which does not have sufficient ventilation. Therefore priority will be shifted to measures regarding transmission by droplet rather than by surface contact.

Given the benefits of outdoor activity overall to young people's health and physical and mental wellbeing, it is considered that the risk level is far outweighed by the benefits of proceeding with outdoor activities.

Overall principles involve:

- Delivering everything outdoors
- When indoors, ensuring plentiful ventilation
- Reducing contact between people and practising social distancing wherever possible
- Encouraging frequent hand washing and use of sanitiser
- Reducing or eliminating the need to share any equipment
- Isolation and cleaning of equipment where needed
-

Individual activity assessments

These notes are produced on the assumption that they will sit alongside the full Risk Assessment document for activities.

Abseiling and Tree Abseil

This will take place on one of the abseil towers.

Participants will be briefed in one of the seating areas, and harnesses and helmets issued.

Participants, as always, will be called forward one at a time to walk up the stairs or to the base of the tree.

The only need for proximity of 1m or less is the brief point at which the instructor needs to clip the participant in to their harness with their karabiner and attach the descender.

The descender and accompanying karabiner will be disinfected at intervals.

High Ropes Activities

These vary but can be grouped according to operational methods.

Individual high ropes activities grouped by operational method

The Perch, The Tree Climb, Ball Jump

Single traversing elements – Indy Crossing, Postman’s Walk, Log Walk, Tarzan Viine

Participants will be briefed in the seating area, and harnesses and helmets issued.

The participant will be called forward and clipped in to the rope by the instructors.

Two other participants are required, to operate the rope under the supervision of the instructor. Whilst this is not actually an essential function and could be performed by the instructor themselves, it is important that young people are occupied and it is thought that the benefits of this should prevail. These participants are not within 2 m of each other or anyone else unless instructor needs to step in to help. There is no need for very close proximity.

The instructor will lower the participant from the top of the challenge once completed. This necessitates some proximity.

Participants are tied in directly to the rope and therefore there is no common piece of equipment (such as a karabiner) for them to use, nor to be disinfected. None of the participants need to have any contact with any pieces of equipment which will be passed one person to another.

Jacob’s Ladder, Ninja Climb, Crate Challenge, All Aboard

Participants will be briefed in the seating area, and harnesses and helmets issued

The participant will be called forward and clipped in to the rope by the instructors.

Two other participants are required, to operate the rope under the supervision of the instructor. Whilst this is not actually an essential function and could be performed by the instructor themselves, it is important that young people are occupied and it is thought that the benefits of this should prevail. These participants are not within 2 m of each other or anyone else unless instructor needs to step in to help. The instructor will therefore put on a face mask if this is necessary. There is no need for very close proximity.

This task requires three sets of three participants to work together in the groupings as described. These participants are less than 2m apart but do not need to be in close contact.

The exceptions are the Crate Challenge and All Aboard, which require participants to support each other – face masks would be useful here if this is school policy. All other factors remain the same for these activities.

Participants on the challenge itself (as opposed to belayers) will sometimes need to help each other, but do not need to be in close proximity.

The instructor will lower the participant from the top of the challenge once completed. This necessitates the instructor being within 2 m of one of the assistant participants.

The Zip Wire

Participants will be briefed in the seating area, and harnesses and helmets issued.

Participants, as always, will be called forward one at a time to climb the ladder (belayed).

The participant will be called forward and clipped in to the rope by the instructors.

The only need for proximity of 1m or less is the brief point at which the instructor needs to clip the participant in to their harness with their karabiner and attach the descender

At the bottom of the zipwire the participant must be disconnected which necessitates some proximity.

Problem Solving Activities

Minefield

This task involves participants going from one point to another by passing a plank along the group, on which they stand to reach the next point. In a large group this can result in students being very close to each other; however restricting numbers in the group mitigates this issue. Larger groups may complete the challenge in two separate halves.

Bomb Task, Gutterball, similar tasks

This task requires four or five participants to use a set of equipment to extract a 'bomb' from a tube. Whilst it does require coordination, it does not require excessive proximity.

Titanic Task, Spider's Web, Rope Triangle

These activities require participants at points to be in proximity, and therefore instructors will take extra care to minimise these periods and encourage use of masks where the instructor thinks necessary.

Other Activities

Climbing – Indoors

Participants will be invited into the climbing wall and the briefing will be done while they sit on the benches at the side. Harnesses will be issued.

The participant will be called forward and clipped in to the rope by the instructors.

Two other participants are required, to operate the rope under the supervision of the instructor. Whilst this is not actually an essential function and could be performed by the instructor themselves, it is important that young people are occupied and it is thought that the benefits of this should prevail. These participants are not within 2 m of each other or anyone else unless instructor needs to step in to help. The instructor will therefore put on a face mask if this is necessary. There is no need for very close proximity.

Climbing at Withead Climbing Wall (High Sports) – in addition to any other TrekCo measures, the group must comply with High Sports' procedures which are to be found at: <https://www.high-sports.co.uk/covid-19>

These include for participants the need to wear face coverings at all times except when climbing. In the case of courses with repeat sessions with the same participants e.g. NICAS courses, participants will be issued with equipment of their own which they will keep, avoiding the need for quarantine. Hand sanitiser must be used at every exchange of any equipment, and in any event should be used every 30 minutes.

Climbing – Outdoors

The mechanics of the actual climbing will be almost identical to that for indoor climbing above. In addition:

The approach to the rocks involves walking across the fields and climbing two stiles – care should be taken that participants don't 'bunch up' at the stiles.

Equipment must be carried to the rocks by rucksack (even if transported by car to the layby).

Rock Scrambling

The approach to the rocks involves walking across the fields and climbing two stiles – care should be taken that participants don't 'bunch up' at the stiles.

The group should be briefed carefully with regard to distancing; however there is no need for participants to be close to one another.

Any assistant (usually a capable adult accompanying the group) asked to 'spot' will be made aware of the need to be aware of close proximity if necessary, and to use hands sparingly.

Orienteering

Orienteering equipment will be disinfected in between uses. Maps are laminated and can therefore be cleaned; we do not issue compasses for orienteering. Pencils and paper are sometimes issued; if this is the case then the pencils may be cleaned in between uses.

Participants have no need to be extremely close to each other.

Canoeing and Kayaking

This will take place on Weirwood Reservoir.

Paddlers must practice social distancing at all times and maintain a distance apart of at least 2m between people.

Minimal contact must be made when putting on safety equipment.

Sessions will take place in shallow water whenever possible to minimize the need for instructors to carry out deep water rescues and therefore be in close proximity of the paddler.

Where a deep water rescue has to be carried out the instructor may put a mask on before approaching the paddler, unless there is entrapment or immediate danger to life. Communication will be made upon approach and the rescue carried out with minimal physical contact.

Launching and landing will be done with maximum distance between paddlers, staggered launching and landing if the group is too large for the launching/landing area.

Any water based activity will be conducted in a way to make the implementation of social distancing easier to manage. i.e. no side by side rafting, games involving boat to boat contact, etc.

Shelter Building

This activity does not utilise any equipment needing sanitisation; any string given out may be discarded.

The principal measure to be used in this activity is group management and reminders of social distancing.

Archery

Archers will be walked to the activity and asked to wait behind the shooting line as normal, and the session will proceed as normal with the exception that:

1. In order to halve the amount of times equipment is passed between people and yet not have children waiting excessively, the normal three arrows before changing shooters may be extended to six.
2. Bows and arrows will be wiped and disinfected after sessions.

Bridge 75 Abseiling, Peak District

Risk: Transmission of COVID-19 person to person

Instructors are assigned to a specific activity group for the duration of their stay. They must socially distance from all other staff and participants outside of the activity group. Groups must be briefed that there may be other groups present on the bridge and that they must under no circumstances mix. This will also require lead instructors to talk to the lead instructors of the other groups and co-ordinate movements, sanitise abseil stations in between groups etc. It is in no-one's interests to have groups, staff or equipment mixing, and close co-ordination and co-operation is vital. If another group is not forthcoming with this co-operation, wait until they leave and disinfect the railings before use. This co-ordination applies from the car park, throughout the activity, and back to the car park including toilet use, waiting time and location etc.

Social distancing guidelines (2m, or 1m with risk mitigation where 2m is not viable is acceptable) should be followed wherever possible.

Where participants are asked to don harnesses and helmets, they will be shown by demonstrating and as far as possible not manually helped – if this is needed then ask an accompanying teacher to do this wherever possible.

Each participant shall be issued their own harness and helmet which they will keep with them for the duration of the session and therefore instructors must ensure that there are more than enough for 1 item per person when preparing for the session.

Where instructors carry out a task which requires close contact (within 1m – including physical contact) additional risk mitigation must be implemented:

- a) Keeping close contact time as short as possible.
- b) Instructor to wear face covering.
- c) Asking participants to wear face coverings if it is felt necessary.
- d) If the individual is exempt from wearing a face covering, to face away from the instructor.
- e) Where instructors carry out a close contact task, wash hands/use sanitiser immediately.
- f) Instructors must be trained in the putting on and removal of PPE and the safe disposal of PPE and potentially infectious material.

Further notes on Risk Assessments for Covid

1. These risk assessments don't include Mountain biking – this activity is held at Deers Leap Bikes adjacent to Blackland Farm and is covered by Deers Leap risk assessments (Deers Leap biking instruction is delivered by The Trekking Company).
2. Canoeing and Kayaking notes were produced by Bruce Lee, senior instructor at The Trekking Company.

Appendix 1

Minibus Travel

Government guidance and updates have been issued regarding travel by school and college students at: <https://www.gov.uk/government/publications/transport-to-school-and-other-places-of-education-autumn-term-2020/transport-to-school-and-other-places-of-education-autumn-term-2020#main-changes-since-this-guidance-was-last-updated>

These guidelines state that schools: ‘.. should then work through the system of controls set out in this guidance and adopt measures in a way that addresses the identified risk, works in the local circumstances, and enables children and young people to attend their school or college.’

These are the main points arising where TrekCo are providing transport by minibus, using coaches, or are driving school minibuses:

- Transport by minibus will comply with Government guidelines
- Normal TrekCo minibus risk assessments still apply regarding drivers, road safety, loading etc – see TrekCo Risk Assessment document.
- Where using a hired coach or minibus:
 - o check the provider’s Covid arrangements.
 - o open windows where provided to maximise ventilation.
- Where TrekCo staff are driving participants or working in proximity to participants, they will undergo a ‘lateral flow’ test twice weekly.
- Students being transported will need to comply with the school’s policy on testing.
- Windows must be open. Any available methods to increase ventilation to the outside air should be used. Clearly there may be occasions where the weather prevents this but it should be implemented wherever possible.
- The school/college should allocate the same vehicle each day where feasible.
- The minibus should be cleaned before the first use and after last use with that group.
- Students should sit a) as far apart as is feasible and b) in the same seat for each journey.
- If anyone develops symptoms at any point, arrangements should be made for that person to be picked up and transported home as soon as it is safe and feasible to do so. The driver should consult with school staff and parents/carers as appropriate. Circumstances and location will determine the best course of events.
- Students should be encouraged to carry tissues and be aware of respiratory hygiene, following the ‘catch it, kill it, bin it’ routine.
- On getting on/off the minibus, students should board in order – those nearest the back enter first etc – i.e. they should try to avoid ‘crossing’ each other.

This information covers the practical aspects of the journey; further detail on actions in the event of someone developing symptoms, behaviour, school provision etc are to be found in the abovementioned document.

Appendix 2

Accommodation

As of May 17th 2021 school residential visits may take place.

Guidance on accommodation for outdoor visits may be found at:

<https://www.gov.uk/government/publications/actions-for-schools-during-the-coronavirus-outbreak/schools-coronavirus-covid-19-operational-guidance#educational-visits>

It should be noted that at each stage of a change in Covid regulations a new set of guidance will appear and it is likely that this guidance may be superseded at short notice.

Domestic arrangements – it is our usual practise to ask pupils to wash their own dishes after dinner, and this is felt to be a very positive facet of camp. This will be continued, but pupils must wash their own dishes and use their own tea towels, and sanitise afterwards (sanitiser will be positioned at the location).

Date revised: 8th September 2021
